Despite the worst financial crisis since the Great Depression and a series of shocks in its aftermath, the economy has gradually strengthened since mid-2009, though more work remains.

The Components of Growth Since 2009

U.S. economic growth has been led by consumption, private sector investment, and exports.

Percentage point contribution to real quarterly GDP growth, by component

- Personal consumption expenditures
- Gross private domestic investment
- Exports
- Imports
- Government consumption and gross investment

Total GDP growth

Cumulative contributions to growth since 2009 Q2, by component

Three Misconceptions About Recent Economic Growth

Some analysts have asserted that the following factors have been impediments to growth:

1. **Regulations.** Have increased regulations or regulatory uncertainty been a major factor in holding back growth?

2. **Taxes.** Is a high tax burden – or fears of future tax burdens – impeding growth?

3. **Government.** Is government so large that it is getting in the way of private sector-led growth?

But the facts do not support these assertions.
Regulations are not impeding business lending or investment.

Commercial and industrial loans outstanding, constant 2011 dollars (log scale)

Percent change in real investment in equipment and software 11 quarters after NBER trough

- 1981-82 Cycle: 38%
- 2007-09 Cycle: +34%
- 1990-91 Cycle: 28%
- 1973-75 Cycle: 28%
- 1960-61 Cycle: 26%
- Average (excl. 2007-09): 21%
- 1969-70 Cycle: 21%
- 2001 Cycle: 19%
- 1957-58 Cycle: 8%
- 1980 Cycle: 2%

Investors remain confident that the U.S. government will meet its real fiscal obligations, as demonstrated by:

- Low cost of insurance against default and...
- Low inflation expectations.

Graphs showing:
- 5-year sovereign credit default swap prices for the United States, Germany, and France.
- One-, five-, and ten-year U.S. inflation expectations over time.

**Regional sources**
- Euro Area: Statistical Office of the European Communities
- Japan: Cabinet Office of Japan
- U.K.: Office for National Statistics
- U.S.: Bureau of Economic Analysis

“Euro Area” consists of the following 17 European Union member countries who have adopted the euro (European Monetary Union): the 11 original members - Austria, Belgium, Finland, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain - and Greece (from January 2001), Slovenia (from January 2007), Cyprus and Malta (from January 2008), Slovakia (from January 2009) and Estonia (from January 2011).

**Chart 5**

“Private contribution to real GDP growth” defined as the sum of the contributions of real personal consumption expenditures, real gross private domestic investment, and real exports to overall annualized quarterly real GDP growth, in percentage points.

**Chart 10 cont.**

2 “High-income filers” are those who would be subject to the top two individual income tax brackets under the President’s FY2013 Budget proposal.

3 “Small business owners” defined as filers a) with business income and deductions of less than $10 million, and b) who employ other individuals. See Knittel et al, *Methodology to Identify Small Businesses and Their Owners*, Office of Tax Analysis Technical Paper 4, August 2011.

4 “New revenue” includes revenues raised in Fiscal Year 2013 by reversing the EGTRAA/JGTRAA rate cuts on the top two individual income tax brackets to small business income of high-income filers who own small businesses with employees.

U.S. Department of the Treasury, Office of Tax Analysis calculations. Revenue estimate excludes increased revenue that would come from the expiration of other upper-income EGTRAA/JGTRAA tax cut provisions such as those affecting itemized deductions, personal exemptions, qualified dividends, and capital gains.

The calculation of the additional revenue from small business employers takes into account the variation among taxpayers in the importance of small business income. Since the highest income classes pay most of the added tax but are less dependent on small employer income, the small employer share of the total tax increase is lower than the small business share of total income.
