

Location B Modeling Assumptions

(If Needed)

- Assume total workers' compensation in the dispersal zone is 300,000 and 80% of this workforce (240,000) are working at the time of attack.
 - Your answer should be based a reasonable approximation of your market share, then assume that 50% of these individuals present for medical monitoring.
 - Individuals presenting for medical evaluation can be assumed to have sustained some sort of physical manifestation, discomfort, or illness and/or harmful exposure.
- There would be a wide range in actual costs for medical monitoring based on individual exposure levels, etc. Assume the reasonable average cost to rule out more serious disease (as a composite of all individuals who receive medical monitoring is \$10,000 per worker.
- As the fact pattern states, assume 500 individuals have a serious actual injury. Your answer should be based on a reasonable approximation of your market share. The following assumptions can be applied as to the level of injury incurred among these individuals:
 - 20% permanent total disability
 - 30% permanent partial disability
 - 50% temporary disability
